

## **Lesson 7**

## **Develop a Plan to Protect Pollinators**

Write out a detailed plan for how you might increase the numbers of insect pollinators on the property around your house. Include any IPM strategies that you would put in place, in an effort to protect those pollinators attracted to your property. Your report should be at least one typed page, containing enough details so that any reader of your report could replicate your project on his/her property.

**Note:** To take this project one step further and earn a badge for implementing IPM strategies, go ahead and actually carry out your written proposed strategy on your home property, and submit photographic evidence as documentation of your work.
